Pedagogical pathway

TAYLOR-MADE TRAINING DESIGN

Before beginning any training, it is essential to think about who are the people who are going to receive it. The design of the training is always linked to the user of the same, therefore it is necessary to design the space and the content before the start of the training so that it is useful for the students.

COLLABORATIVE METHODOLOGIES

Collaborative learning is a way of learning as a team, in which students are divided into small groups, with similar knowledge and skills, in order to carry out an assigned task.

In this type of learning, the teacher usually has a role of guide and observer, and only intervenes if he sees it necessary. It is also known as "group work", and it is common for the participants to distribute the tasks equally.

ACTIVE METHODOLOGIES

The active participatory methodology is a way of working that conceives the participants of the processes as active agents in the construction and reconstruction of thought.

The active participatory methodology promotes and seeks the active and leading participation of all group members including the facilitator (teacher) in the teaching-learning process.

Technological way

Google Classroom

Google Classroom is a tool created by Google in 2014, and intended exclusively for the educational world. Its mission is to allow a classroom to be managed collaboratively through the Internet, being a platform for learning management or Learning Management System.

KAHOOT

Kahoot!, a very useful tool for teachers and students to learn and review concepts in an entertaining way, as if it were a contest. The most common way is through multiple choice questions, although there is also room for discussion and debate.

GENIALLY

Genially is a web application for making interactive presentations. Genially offers you an assortment of templates and resources to make content creation very easy.

The way to work with this application is to create power point style presentations in which slides with different presentation formats are inserted. Genially guides through the process and allows you to access a set of resources to create interactive presentations, educational content, content for social networks or company presentations.

HOW TO BE A EDUPRENEUR

PROACTIVITY

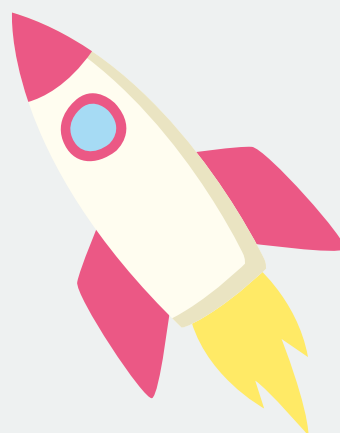

For being a Educhampions the proactivity is the most important competence...behind this there are some skills that are needed:

Transform ideas into actions, act and not stand still, seek new opportunities, be results oriented, flexibility.

EMPATHY

Having the ability to be empathic is positive to keep motivation high and to solve problems; consequently, it allows the EDUCHAMPION to build meaningful and lasting relationships with those around them.

LEADERSHIP

An Educhampion must organize and motivate a group of people to achieve a common goal, through innovation, seizing opportunities and managing the dynamic environment.

An Educhampion loves to see and seize opportunities and create value for others, they understand that their role is one of leadership and they are happy to help others perform to the best of their abilities.
